

AMENDMENTS TO THE CLAIMS

A1
B1

1. (Currently Amended) An event management system for a plurality of users for use in event coordinating, the system being accessible by an event provider and by at least one non-provider user, the at least one non-provider user being from a group of event clients, vendors and suppliers, the system comprising:

a repository having information associated with event management, the repository having a first access permitting direct access to the repository by only an event provider and a second access permitting limited access to the repository by a non-provider user; said second access including a first digital interface permitting access to the repository by said non-provider user; and a restriction component ~~restricting~~ limiting access of said non-provider user to portions a defined portion of information in the repository.

2. (Currently Amended) The system of claim 1, wherein the repository further comprises a database ~~having predesignated levels of access.~~

3. (Currently Amended) The system of claim 2, wherein the restriction component further comprises:

a plurality of unique identification codes;

a record having all unique identification codes and a level of access corresponding to each unique identification code; and

a software interface for receiving one unique identification code; searching the record for the unique identification code; ascertaining the level of access corresponding to the

unique identification code; and ~~restricting~~ limiting access to the information in the database according to the ascertained level of access.

4. (Original) The system of claim 3, further comprising an access card having one unique identification number.

5. (Original) The system of claim 1, wherein the digital interface further comprises permitting modification of the information.

6. (Original) The system of claim 1, wherein the digital interface further comprises effecting corresponding changes to the information where such changes are necessitated by modification of the information.

7. (Original) The system of claim 1, further comprising a device for capturing data related to an event display; and
a presentation component for displaying the captured data.

8. (Currently Amended) The system of claim 7, wherein the ~~first~~ device for capturing data ~~further~~ comprises a video camera.

9. (Currently Amended) The system of claim 7, wherein the presentation component ~~further~~ includes a software interface to facilitate visual presentation of the captured data.

10. (Currently Amended) The system of claim 7, wherein the device for capturing data further comprises a functionality component for capturing data at a production site.

11. (Currently Amended) The system of claim 7, wherein the device for capturing data further comprises a functionality component for capturing data at an event site.

12. (Currently Amended) An event management system for use in event coordinating, the system being accessible by an event provider and by a plurality of non-provider users and being accessible via a communication network, the non-provider users being from a group of event clients, vendors and suppliers, the system comprising:

a server accessible via the communications network;

a database having ~~predefined levels of~~ event management information, the database being associated with the server;

a digital interface to facilitate access to the database by a plurality of non-provider users;

a plurality of unique identification codes, each unique identification code ~~corresponding to a predefined level of information~~ permitting limited access to the event management information;

a restriction interface for verifying unique identification codes and ~~ascertaining proper levels of limiting~~ access to the event management information;

a video camera for capturing detail pertinent to a production site and an event site;

and

a presentation interface for presenting the captured detail.

13. (Original) The system of claim 12, wherein the server further comprises a website server.

14. (Original) The system of claim 12, further comprising a plurality of access cards, each access card having a unique identification code.

15. (Currently Amended) The system of claim 12, wherein the presentation of the captured detail further comprises a multimedia presentation of the data.

16. (Original) The system of claim 12, further comprising a plurality of reports related to an event.

17. (Original) The system of claim 16, wherein the plurality of reports embody webpage formats.

18. (Original) The system of claim 12, further comprising an arrangement component for facilitating travel accommodations.

19. (Original) The system of claim 18, wherein the arrangement component embodies ~~a~~ webpage format.

20. (Original) The system of claim 12, further comprises a modification component for facilitating interrelated changes to the information in the database.

B1

21. (New) An event management system for use in event coordinating, the system being accessible by an event provider and by at least one non-provider users, the at least one non-provider user being from a group of event clients, vendors and suppliers, the system comprising:

a server;

a database associated with said server, the database having event management information, a first access and a second access, the first and second access including a digital interface that permits a provider and a plurality of non-provider users to access the database; and

a restriction component associated with the second access, the restriction component limiting access of the plurality of non-provider users to a defined portion of event management information in the database.

22. (New) The system of claim 21, wherein the server further comprises a website server.

23. (New) The system of claim 21, further comprising a device for capturing data related to an event display; and

a presentation component for displaying the captured data.

24. (New) The system of claim 23, wherein the device for capturing data comprises a video camera.
